WINTER is here, and no matter what style your roof is

TAM LAPP Construction LLC. has snow guards to fit it.

Protect your visitors, gutters, and landscaping by installing snow retention systems designed for your roof.

NEW PRODUCT HIGHLIGHT:

Product Description: S-5 ColorGard

The ColorGard system uses an engineered and tested S-5 Clamp to mechanically attach the ColorGard rail to your metal roof. The clamp allows this product to be installed regardless of the temperature. Installation causes absolutely no penetrations or holes in the metal panels. A strip of metal matching your roof color slides in the face allowing an unsurpassed color match. All this adds up to a system that will perform and look good for many winters to come.

The S-5U Clamp also makes an excellent way to attach almost anything to a standing seam roof. Uses include mounting antennas, supporting HVAC equipment and many others.

Product Description: SS HEART SNOW GUARD

The Stainless Steel Heart Snow guard is powder coated in all of our popular colors. It is screw fastened and requires a 1.5" flat mounting area. They will fit most popular 36" panels with three 12" flats or four 9" flats without rib straddling! The base has a EPDM Rubber gasket to seal without using adhesives or caulk. Two holes are provided for easily placing screws.

Surface Mount

Product Description: RTCLSM

The RTCLSM is manufactured from crystal clear poly-carbonate with UV stabilizers. On Standing Seam panels, apply this snow guard with adhesive for a no holes installation that allows for thermal movement. On through fastened panels you can use either adhesive or washer headed screws for superior holding power.

Product Description: RTMINI

The RTMINI is manufactured from poly-carbonate with UV stabilizers. A unique Snowflake slot allows for insertion of a metal color chip to match the roof. On Standing Seam panels, apply this snow guard with adhesive for a no holes installation that allows for thermal movement.

Product Description: AP400

Berger AP400 Snow Guards are non-penetrating devices which have been engineered specifically for use with the more popular standing seam metal roof systems. They are secured without glues or sealants, and utilize custom milled stainless steel set screws to clamp them in place. They are produced in cast aluminum, and are available in three different seam widths and heights. The attachment of the AP Snow Guard does not restrict thermal movement. The deeper throat permits it to be secured directly without damaging caps or compressing internal gasketing or sealant pockets. The wide, deep blade design makes it particularly effective in retaining snow with the higher seams and wider panel widths common in preformed architectural roofing.
